

Volante Composer Now Available with SWIFT Implementations on Microsoft .NET and BizTalk

Support for C# code generation from Volante data models now enables SWIFT data movement in and out of Microsoft business solutions

NEW YORK, September 15, 2008 – Powering finance with data management innovations, Volante today released its new .NET implementation of SWIFT messaging to provide built-in compatibility with models, applications and development activities based on Microsoft .Net Framework and BizTalk solutions. The core of this offering is the C# code generator, a platform option offered with Volante Composer.

“Because of its model-driven philosophy, Microsoft .NET Framework has become one of the leading platforms for deploying applications in financial services. With the release of Volante’s SWIFT plug-in for .NET, we are pleased to remove a major impediment to data and application integration with legacy sources and applications,” said Vijay Oddiraju, CEO of Volante. “Microsoft IT shops have a choice now. With Volante, more work can be accomplished in less time along with the added benefit of reusable models for any future system environment”

Volante Composer is the groundbreaking integrated development environment (IDE), which enables simple, rapid and cost-effective implementation of complex data integration encompassing multiple data end points. The Volante innovation of Format Plug-ins provides built-in awareness of messages standards and functions in specific domains, such as SWIFT messaging. The result is added efficiency in data integration projects, cutting time and costs by half or more.

“Volante’s SWIFT Plug-in has attracted customers, system integrators and ISVs across the financial industry due to its ease of use and comprehensive features,” said Venkat Malla, vice president of product management at Volante. “We are now extending these benefits to the .NET and BizTalk user community to enable rapid integration of Microsoft solutions with heterogeneous protocols, applications and middleware platforms.”

Volante support for .NET implementation is available now. For more information, please contact info@volante.com.

About Volante

The first SWIFT vendor partner to win the new SWIFT Messaging Data Services designation, Volante Technologies has been accelerating data management for the

financial services industry since 2001. Volante provides integration solutions for low-latency environments, service oriented-architectures, vendor data consolidation, complex event processing, SWIFT message integration and other complex data challenges. Its metadata-based technology also enables enterprise data governance and model-driven data initiatives.

Volante solutions are employed by buy-side and sell-side institutions around the globe, corporate treasuries, financial industry utilities and exchanges, including Brown Brothers Harriman, The Municipal Securities Rulemaking Board, and Broadridge. For more information, visit www.volantetech.com.
